## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-11 are rejected under 35 U.S.C. 102(a) as being anticipated by Xiang et al. The reference to Xiang teaches all of the structural features of the claimed invention. For example, comparing the FIG. 1 embodiment of Xiang with claim 1 of the instant invention, Xiang shows a gate electrode (34a) formed on a gate dielectric (36a), a pair of source/drain regions (20) and (22) on opposite sides of the gate, wherein the gate has a central portion (34a) and sidewall portions (34b) which overlap the source/drain regions, and have a different work function from that of the central portion of the gate.

In addition, Xiang also teaches using the same metals as claimed by applicants, including polysilicon, ruthenium and palladium. Xiang offers these metals as examples of those that may be used to achieve various different work function differences to suit various applications, and the claimed differences in actual work function would be inherently met by the Xiang disclosure. In addition, since Xiang teaches the use of yttrium oxide as a suitable gate dielectric, the corresponding use of yttrium as a gate metal would be within the scope of the reference.
